Carmen,

Attached for your information are sampling and analysis results generated over the period of April 17 to April 27 related to the cleaning of the former Westinghouse Apparatus Repair facility in Rancho Dominguez, California. At the end of this period, the cleaning work is approximately 70 percent complete. The following attached files provide preliminary (unvalidated) data for air, bulk, and wipe samples. The data are provided in the Level 2 data reports; sample locations and results are shown on the attached drawings. Results are pending for sample locations shown without results.

Following are descriptions of the provided PDF files:

- 00041949-D22-Figure 1 – Locations and results of air samples;
- 00041949-D19-Figure 2 – Locations and results of concrete floor chip and other bulk samples;
- 00041949-D21-Figure 3– Locations and results of wipe samples of non-porous surfaces;
- 00041949-D20-Figure 4 – Locations and results of wall samples, including non-porous (wipe) and porous (chip) samples; and
- J49263-1, J49263-2, J49339-1, J49339-2, J49464-1, and J49464-2 – Analytical laboratory reports from TestAmerica for wipe and bulk samples.

Please note that the drawings are oversized, and you need to zoom in on the PDF file versions to make the information readable.

We continue to collect data as the cleaning work proceeds, and we will forward another “package” of preliminary data as it becomes available. We will compile all of the final (validated) data into tables and figures as part of the report on this cleaning activity.

Please let us know if you have any questions at this time. Thanks.
